

DEVELOP National Program  
Program Overview &  
Wildfire Applications

March 1<sup>st</sup>, 2017

# What is DEVELOP?

**NASA Applied Sciences'** program that **collaborates** with **decision makers** to conduct environmental research projects using **NASA Earth observations**.

**DEVELOP bridges the gap between NASA Earth Science and society**, building capacity in both its participants and end-user organizations to better prepare them to handle the environmental challenges that face society.

*DEVELOP is a dual-capacity building program:*  
**Partners & Participants**

# Dual Capacity Building

## Participants

*Young Professionals, Students & Transitioning Career Professionals*

### Scientific/Professional Development:

- Experience using NASA Earth observations
- GIS and Remote Sensing
- Working in a group environment
- Management and leadership skills

### Personal Development:

- Presentation and communication skills
- Personality typing and working with diverse groups (How NASA Builds Teams)

### Professional Networking:

- NASA scientists and managers
- Partner organizations
- Peers – teams, center, and national

## End-User Organizations

*Local, State, Regional, Federal, Academic, International, and NGOs that participate virtually with DEVELOP teams*

### Scientific/Professional Development:

- Introduction to NASA's Applied Sciences Program and its contributions to society

- Introduction to new methods to augment current practices: cost-saving & time-saving
- Enhanced decision support through use of NASA Earth observations

# DEVELOP Project Characteristics

- ▶ Address **community concerns** relating to environmental issues
- ▶ **Collaborate with decision making organizations** who can benefit from using NASA Earth observations
- ▶ Utilize and highlight the **application of NASA Earth observations**
- ▶ **Science advisors and mentors** from NASA and partner organizations

DEVELOP is rapid feasibility and implementation:  
**10 Week Long Projects**

Partner Engagement

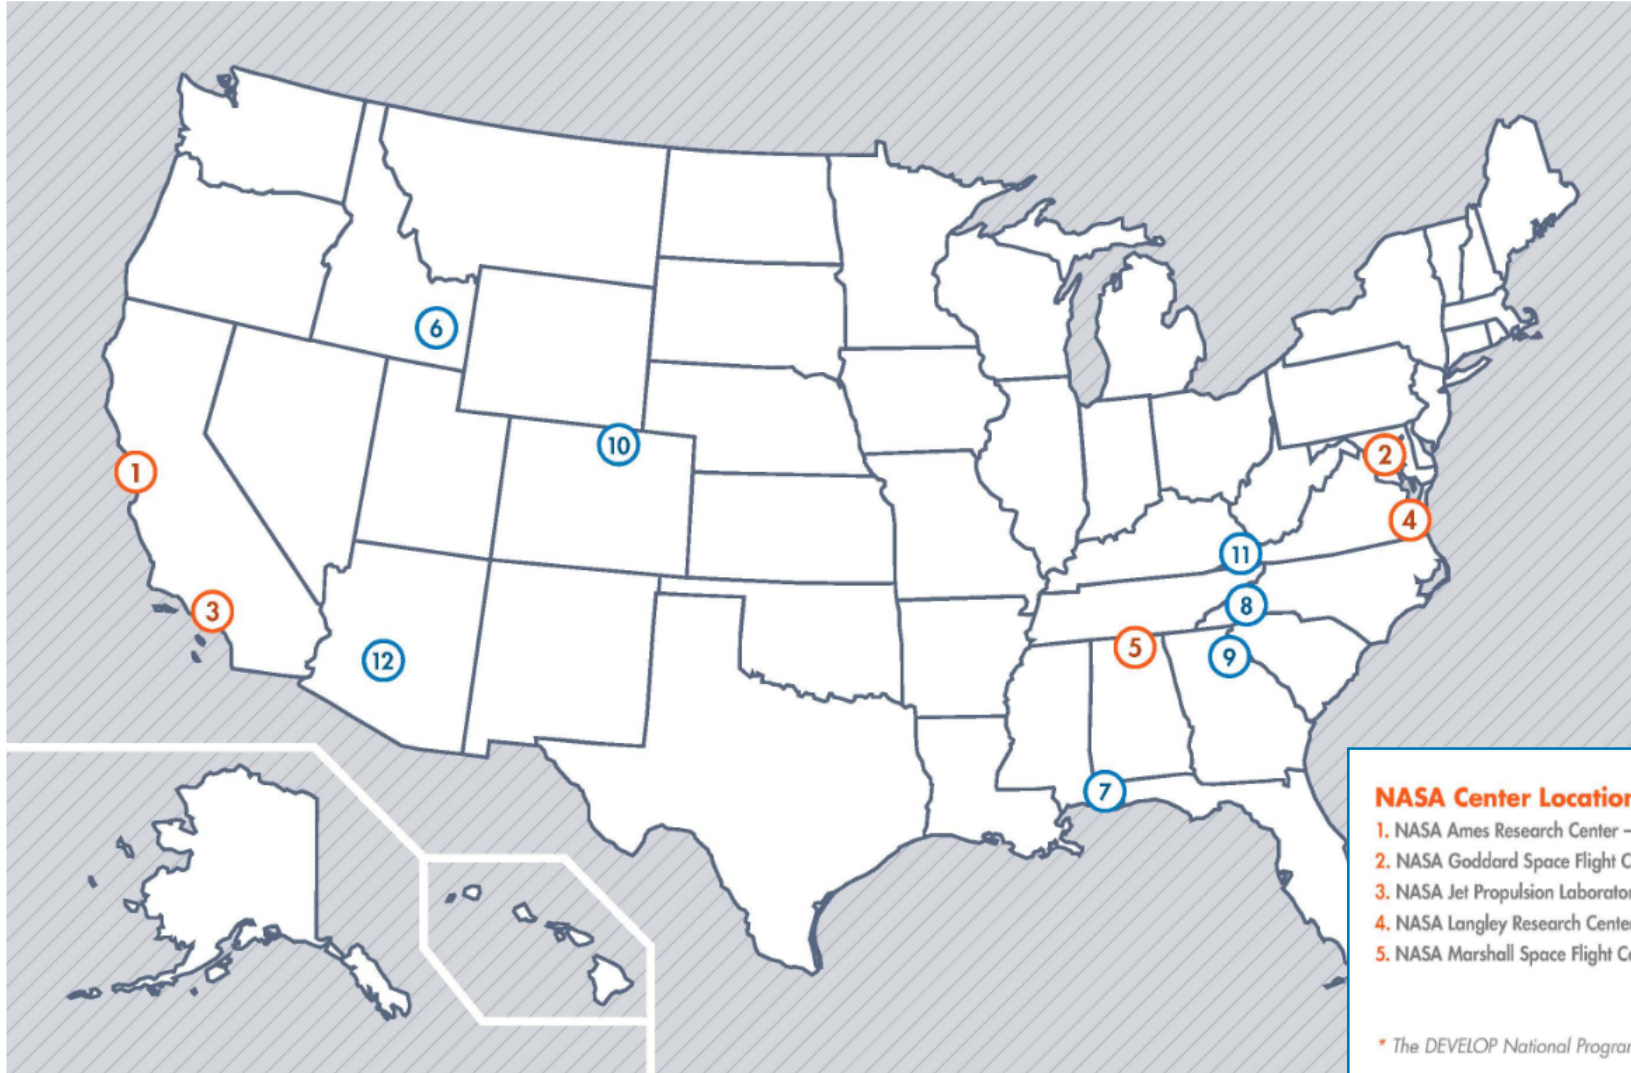

Decision Support Tools

# Where is DEVELOP?

## 12 DEVELOP Nodes

- ▶ Presently only in the United States
- ▶ 12 Offices
- ▶ 5 @ NASA Centers
- ▶ 7 @ Regional Partner Organizations

### NASA Center Locations

1. NASA Ames Research Center – Moffett Field, CA
2. NASA Goddard Space Flight Center – Greenbelt, MD
3. NASA Jet Propulsion Laboratory – Pasadena, CA
4. NASA Langley Research Center – Hampton, VA\*
5. NASA Marshall Space Flight Center at NSSTC – Huntsville, AL

\* The DEVELOP National Program Office is located at Langley.

### Regional Locations

6. BLM at Idaho State University GIS TRC – Pocatello, ID
7. Mobile County Health Department – Mobile, AL
8. NOAA National Centers for Environmental Information – Asheville, NC
9. University of Georgia – Athens, GA
10. USGS at Colorado State University – Fort Collins, CO
11. Wise County and City of Norton Clerk of Court's Office – Wise, VA
12. Maricopa County Department of Public Health and Arizona State University – Tempe, AZ

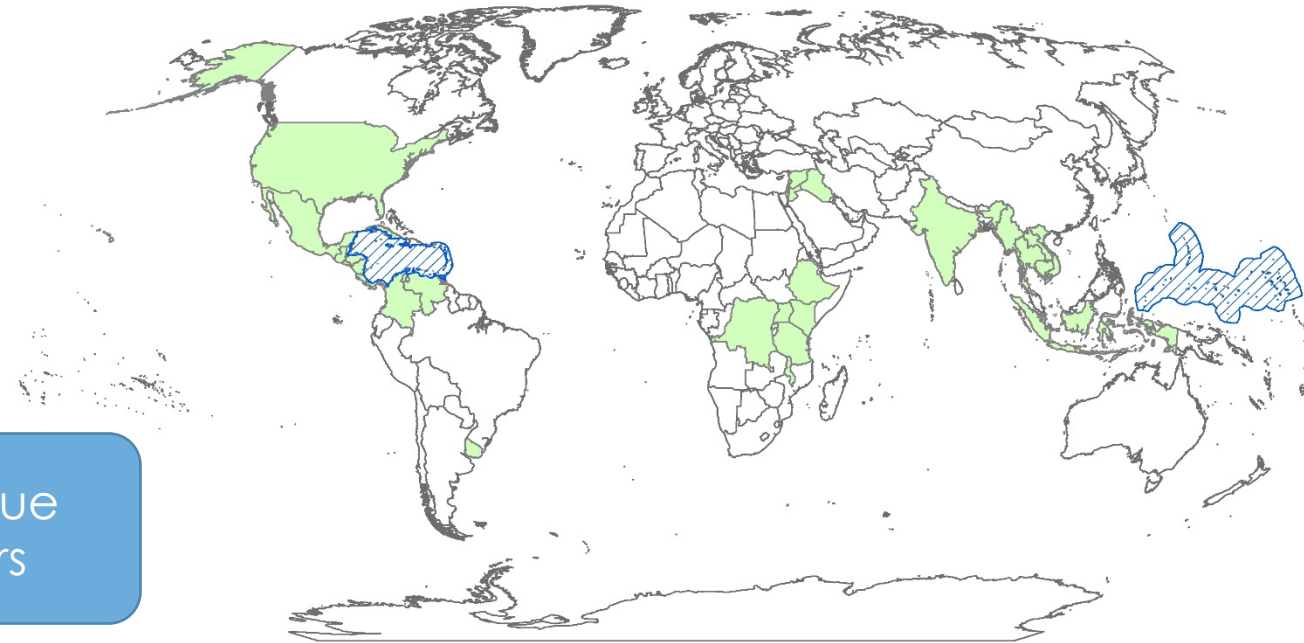

# DEVELOP Impacts: 2016

283 total participants

## 2016 Global Impact : World Regions

## CY 2016 END-USER & PARTNER TYPES

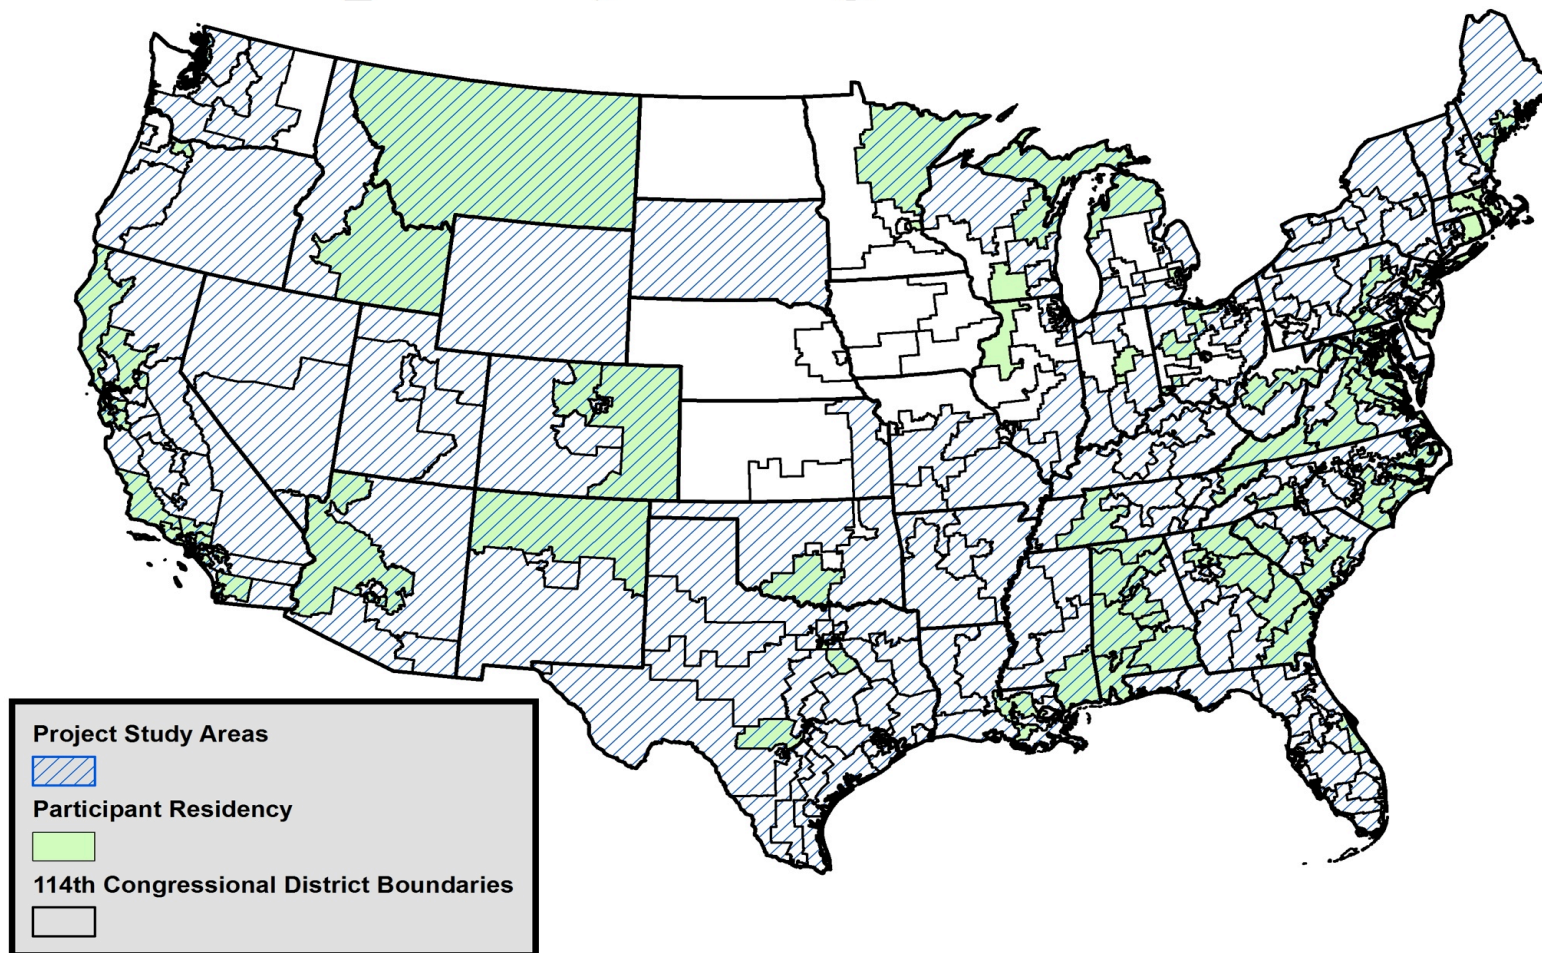

125 unique partners

National Impact  Regional Impact 

# 2016 Impact by Congressional District

# Get Involved

## 1) Propose a project

- Identify a need and end-user for a DEVELOP project.
- Template available for project proposal.

## Project Considerations

- Achievable with NASA Earth observing resources over a 10 to 30-week period
- Addresses an actionable community concern
- Robust communication with end-user (decision makers)
- Specific study region rather than a large area
- Expectations on both sides are clear
- Additional information regarding partnering with DEVELOP and the project request form can be found at:

• <http://develop.larc.nasa.gov/partners.html>

Operations Lead: Lauren Childs- Gleason  
lauren.m.childs@nasa.gov

# Ethiopia Ecological Forecasting

Mapping four decades of fire history for targeted conservation in the south-central highlands of Ethiopia

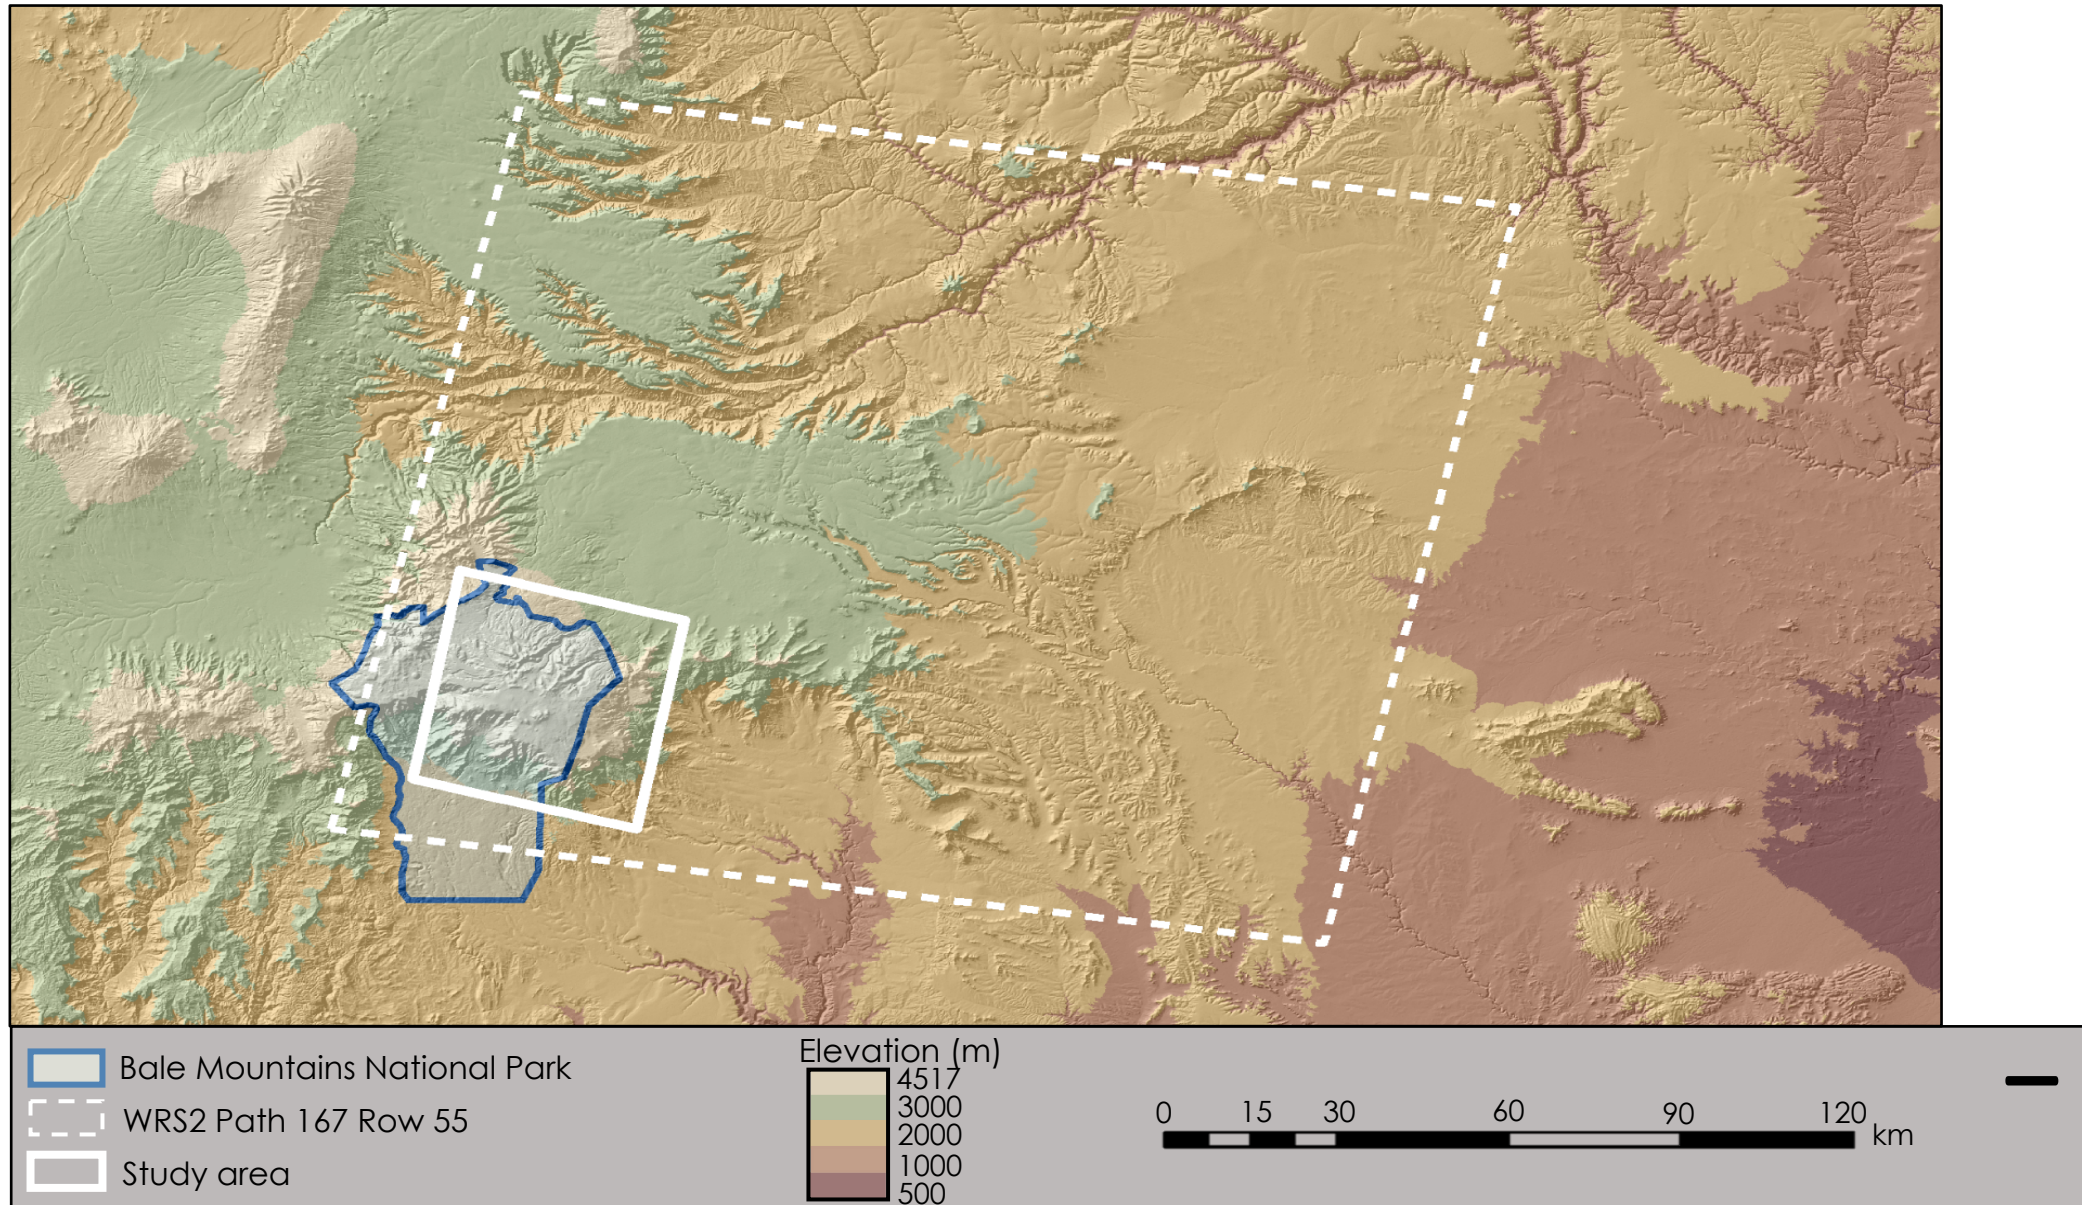

---

Stephen Chignell (Project Lead)  
Kelly Hopping

Chandra Fowler  
Darin Schulte

# Bale-Arsi Massif, Ethiopia

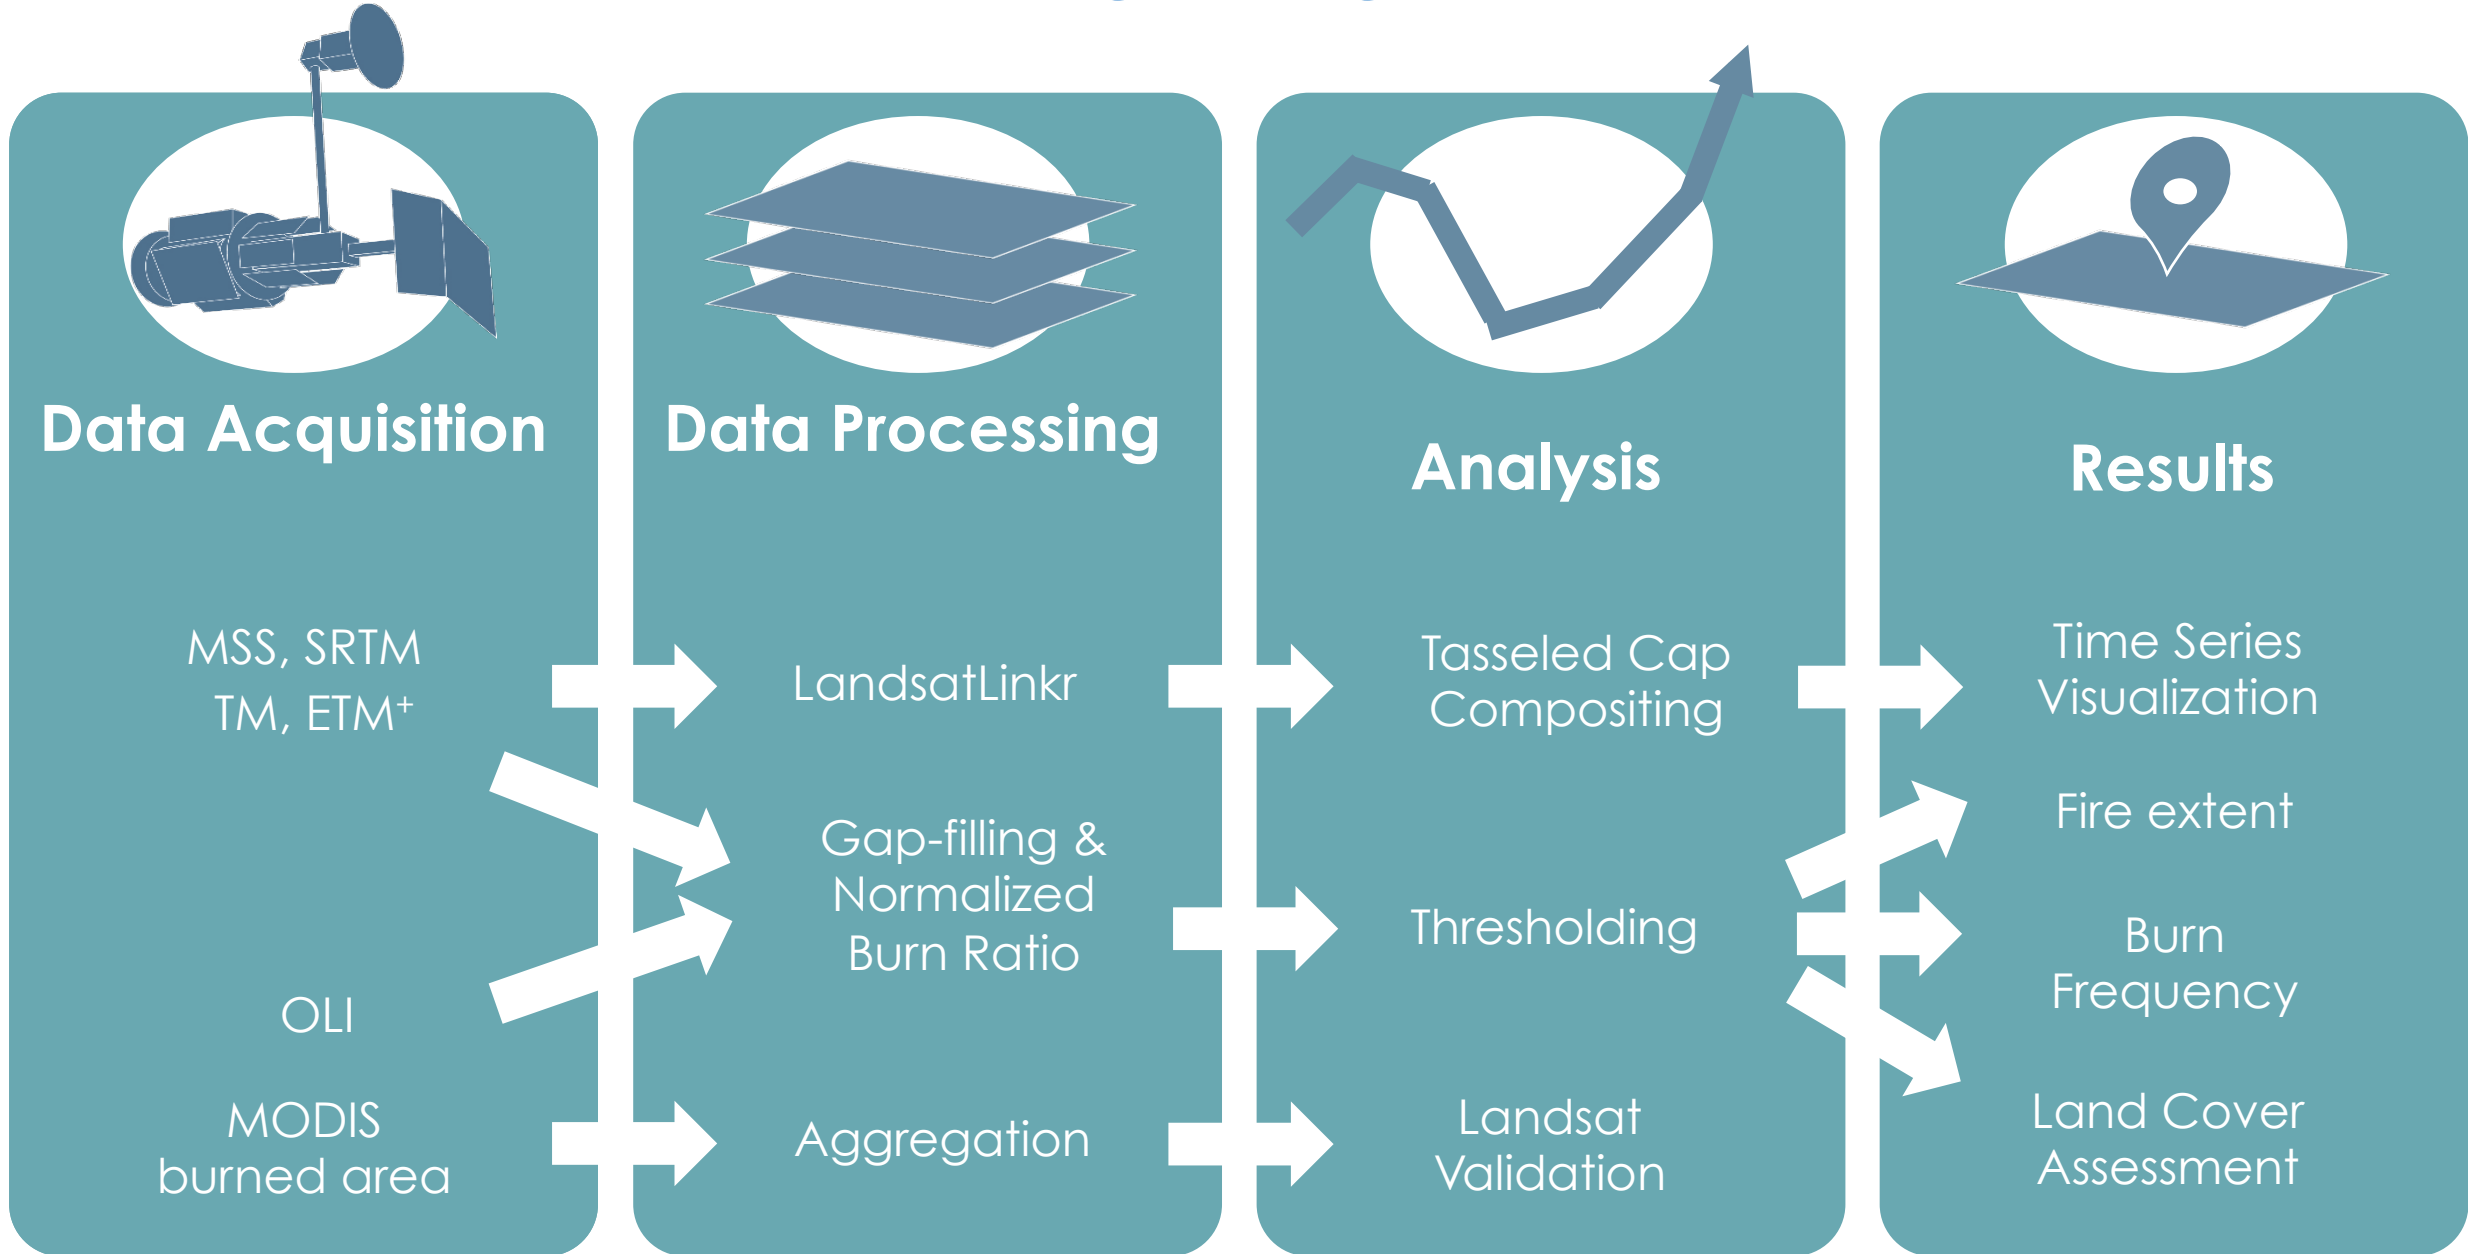

# Objectives

- **Quantify** fire extent and distribution on the Bale-Arsi massif over a 42-year time period
- **Provide** land managers with the most current and complete record of fires in the region

- **Compare** patterns of burning to observed land changes
- **Demonstrate** a reproducible methodology

# Work flow

# Earth Observations

# Data Acquisition & Pre-processing

LandsatLinkr

Atmospheric  
correction

Cloud mask

Georegistration

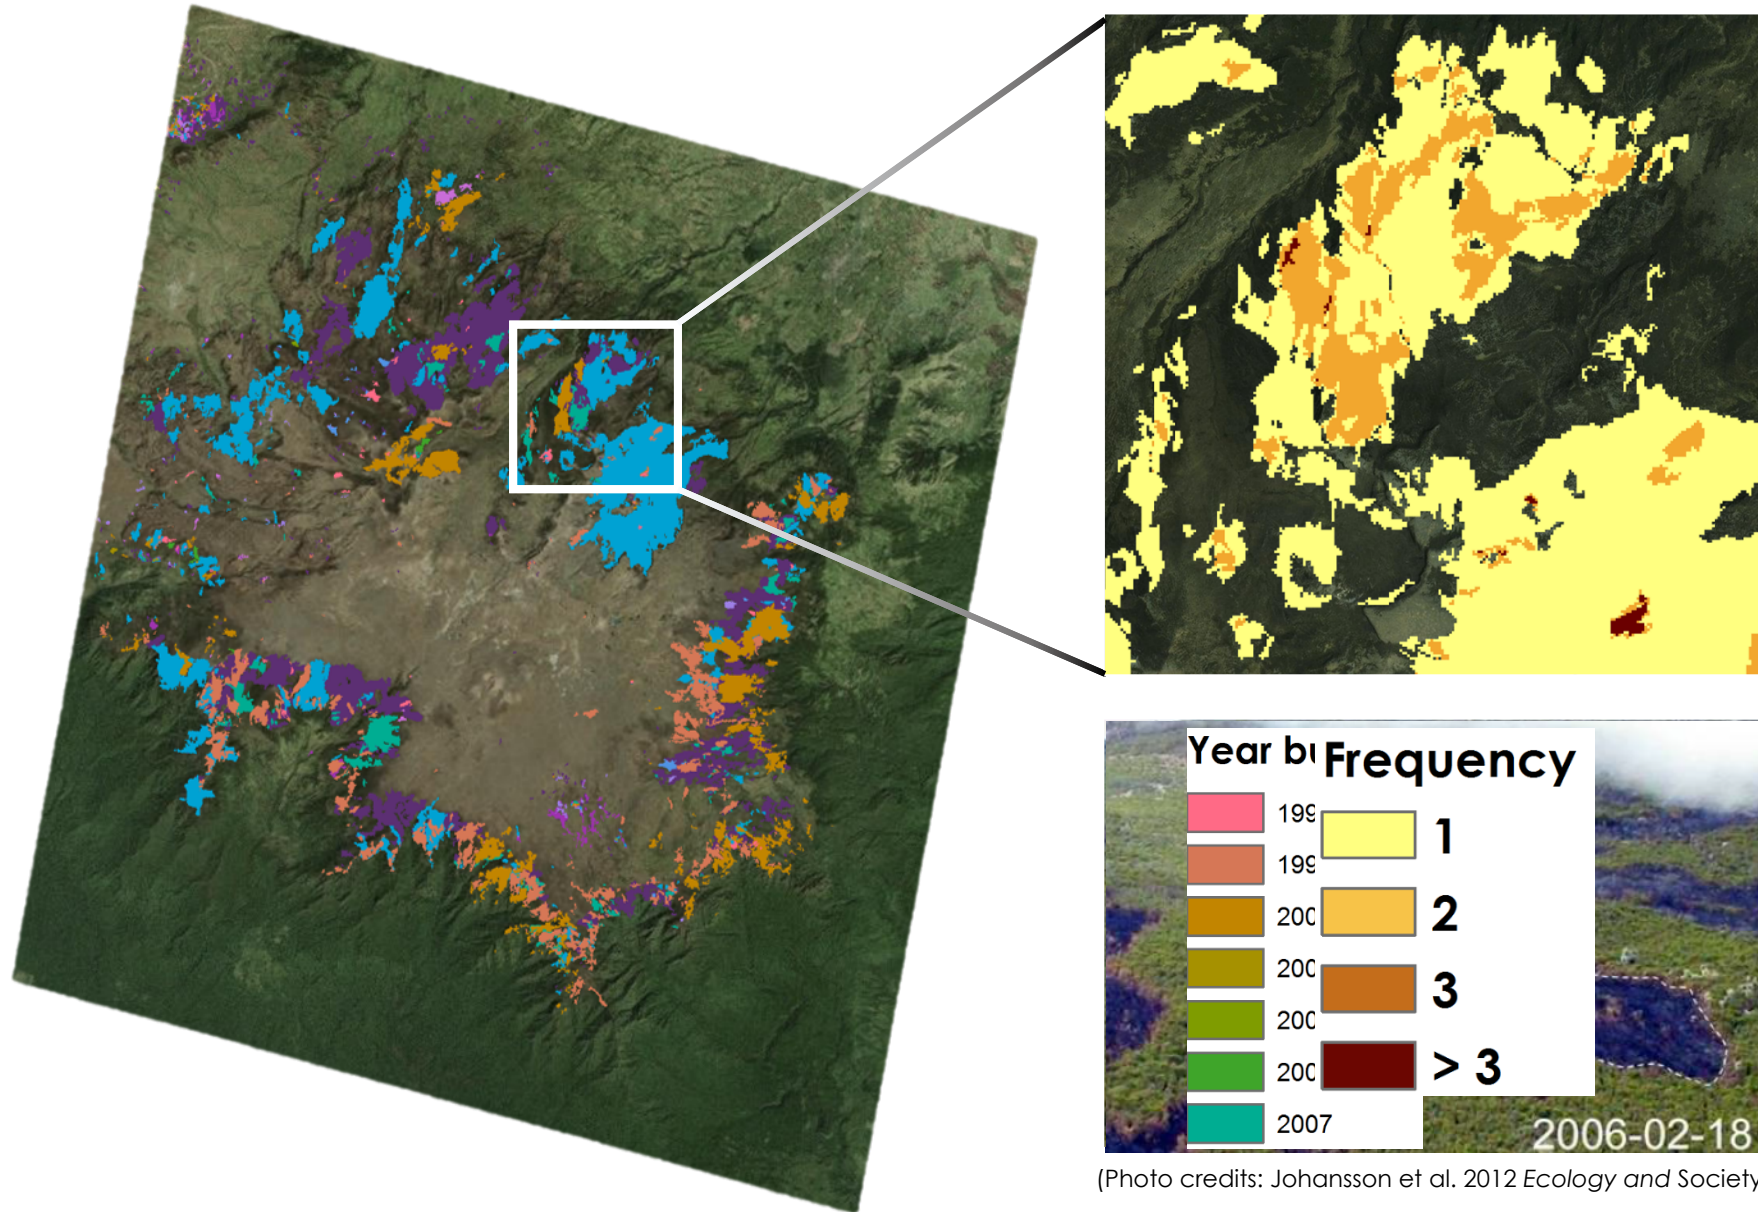

Spectral calibration

# Time series visualization

# Spatial patterns of burning

(Photo credits: Johansson et al. 2012 *Ecology and Society*)

# Vegetation types burned

# Wildlife habitat burned

- Burned
- Unburned

# Conclusions

- ▶ **35% of ericaceous vegetation burned** in the Bale Mountains between 1995-2015, but **few areas experienced repeated fires**.
- ▶ **LandsatLinkr expedites pre-processing**, but data gaps and cloud cover remain challenging for time series analysis in remote, tropical alpine regions.
- ▶ **Final products for partners:**
  - ▶ Maps and spatial data of fire extent and frequency (1995-2015)
  - ▶ Spectrally comparable and composited tasseled cap time series (1973-2015)

# Texas Disasters

*Utilizing NASA Earth Observations to Assist the Texas Forest Service in Mapping and Analyzing Fuel Loads and Phenology in the Texas Grasslands*

Partners: Texas State Forest Service  
USDA Forest Service

Ben Beasley  
Alex Holland  
Kristen Kelehan

# Community Concerns

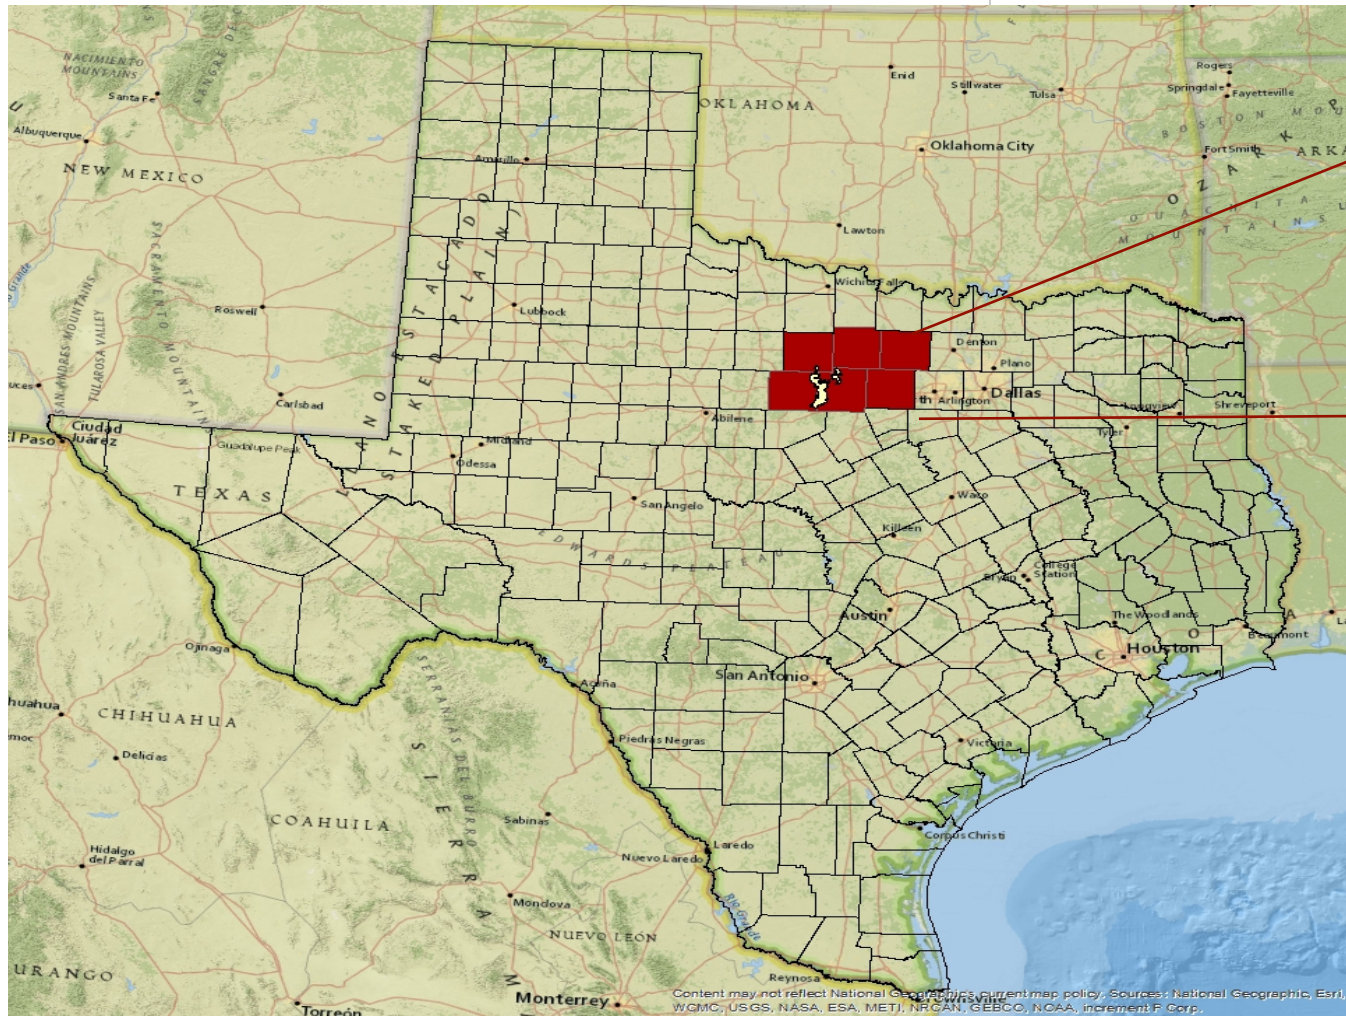

**Wildfires risk has increased** due to climate change and recent urbanization

Texas **grasslands** are highly susceptible to wildfires especially during drought years

In 2011 wildfires in Texas scorched **4,000,000 acres** and destroyed nearly **3,000 homes**

# Study Area

The study covers the State of **Texas** with a case study of the **Possum Kingdom Complex** wildfires which burned approximately 150,000 acres in 2011.

Source: USGS

# Objectives

Enhance current fuel mapping capabilities using **NASA Earth observation** data

Use and demonstrate NASA data to help assess **seasonal variations** in fuel loads

Compile **up-to-date fuel load maps** that depict fuel conditions

# NASA Satellites/Sensors

Sensor	Spatial Resolution	Temporal Resolution
<p><b>MODIS (Terra and Aqua)</b> Moderate Resolution Imaging Spectroradiometer</p> 	<p><b>250 m (bands 1-2) 500 m (bands 3-7) 1000 m (bands 8-36)</b></p>	<p><b>1 Day</b></p>
<p><b>Landsat 8 OLI</b> Operational Land Imager</p> 	<p><b>30 m</b></p>	<p><b>16 Days</b></p>

# Methodology

**Surface Fuel Types**

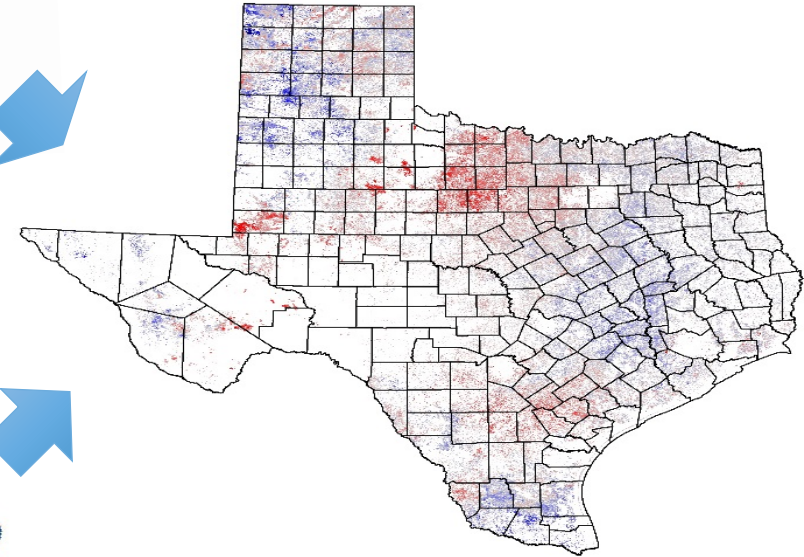

**Vegetation Types**

**Combined Fuels and Vegetation**

**Grassland Annual Relative Fuel Load**

**NDVI**  
2000-2014

**NDVI**  
15 Year Average

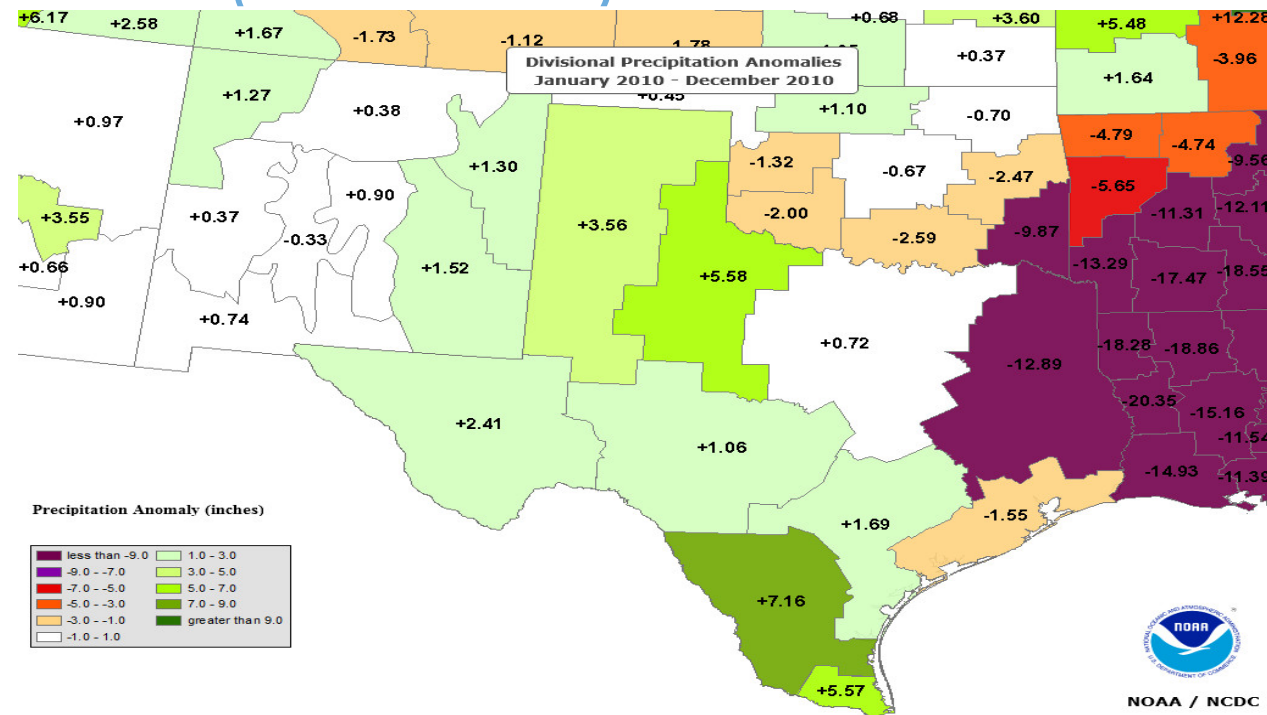

**NDVI**  
Annual

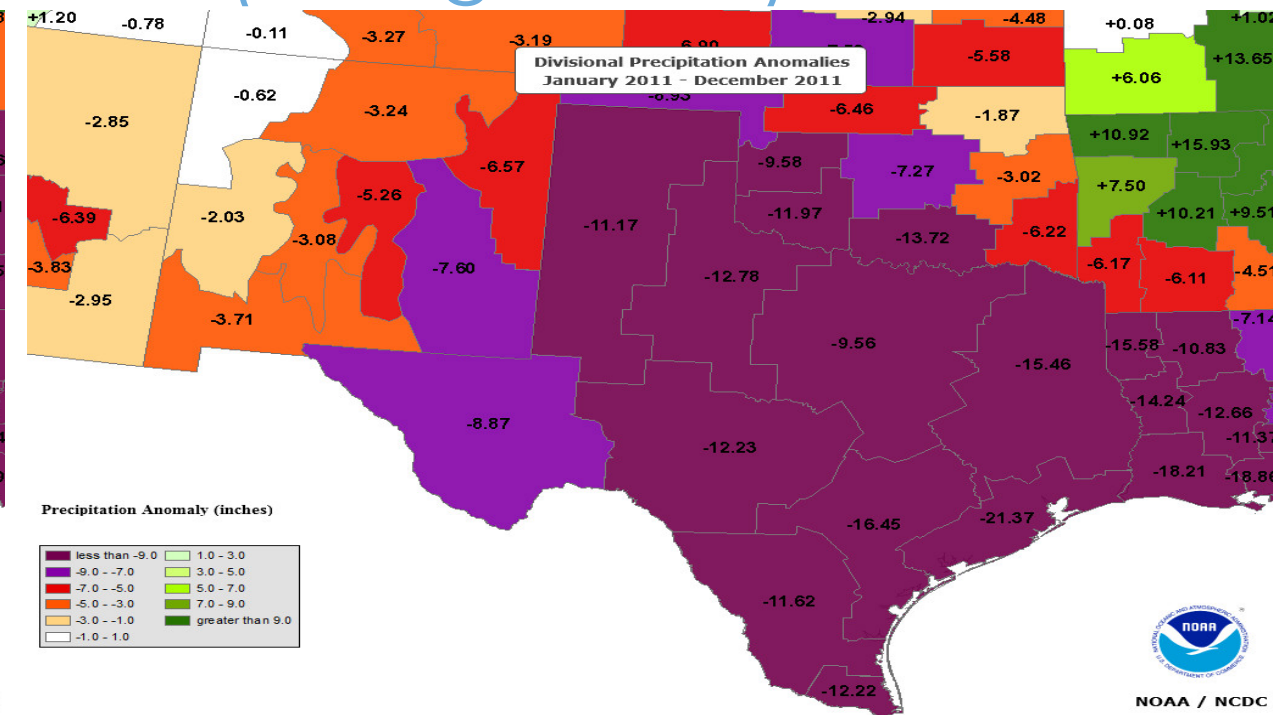

# Annual Precipitation

## 2010 (Wet Year)

## 2011 (Drought Year)

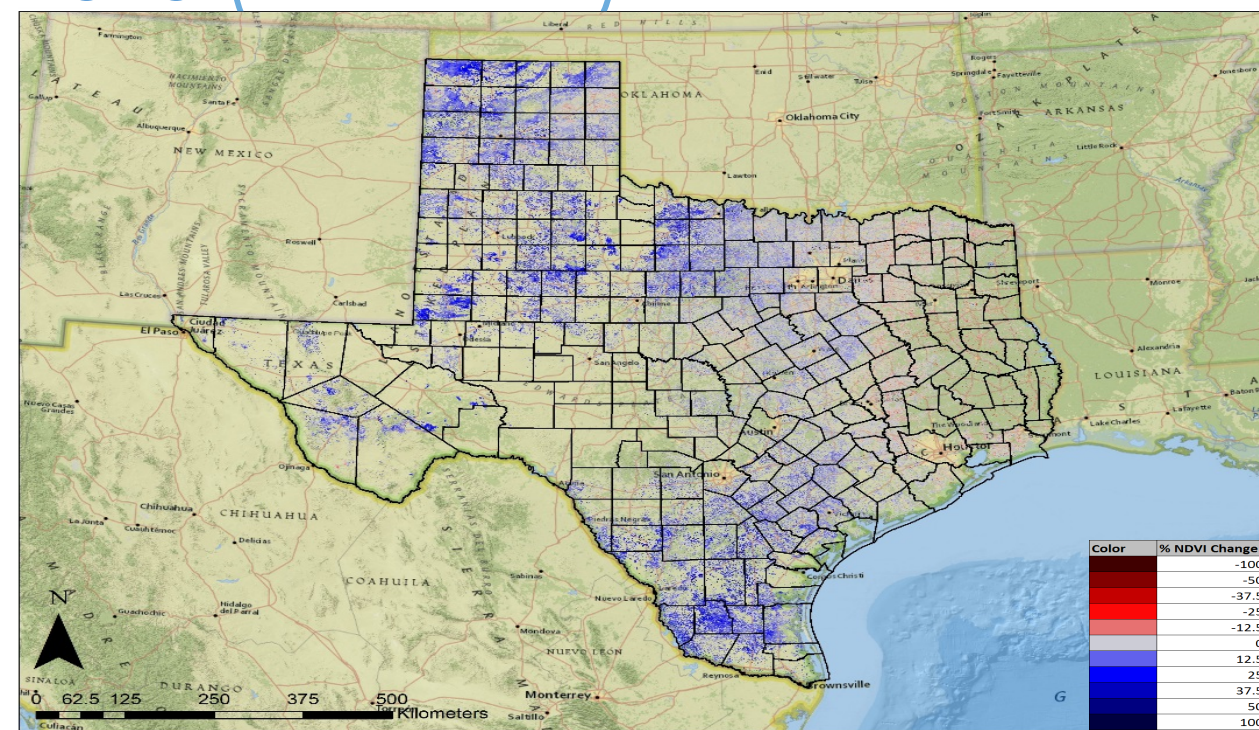

**Relative Precipitation** – These maps compare the annual precipitation to the average annual precipitation. The green areas depict above average and the red and purple depict areas below average.

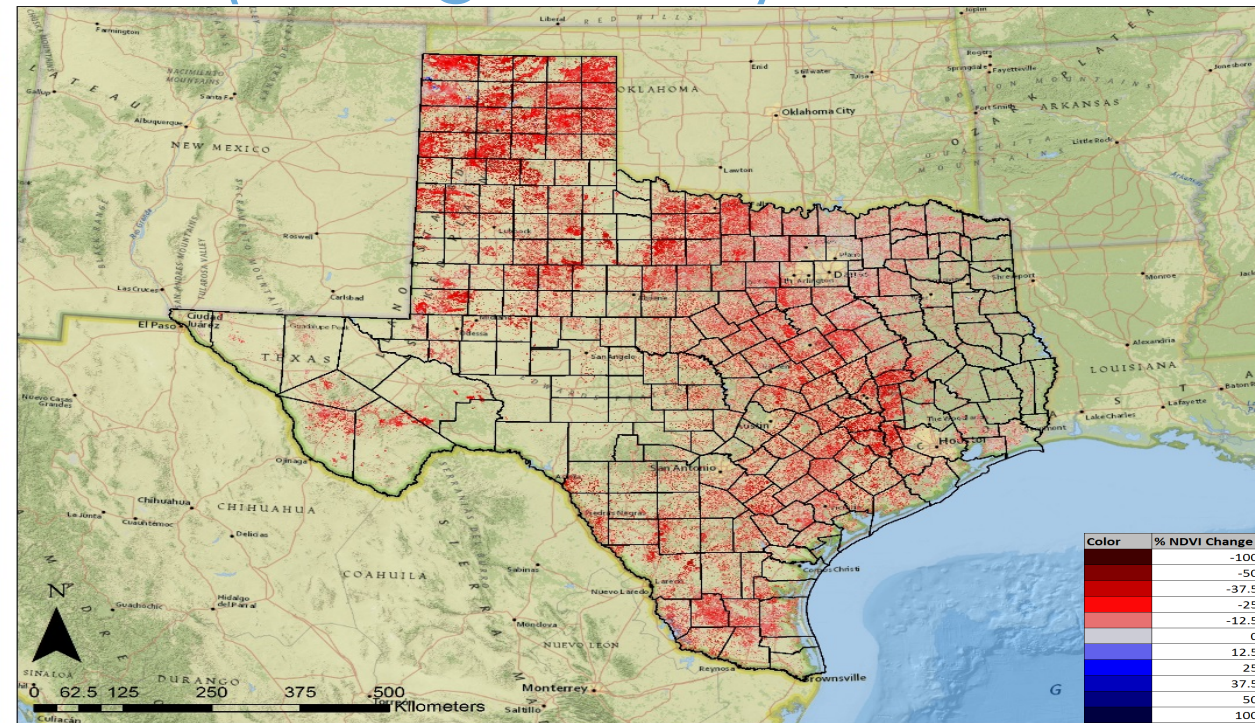

# Results - Texas

2010 (Wet Year)

2011 (Drought Year)

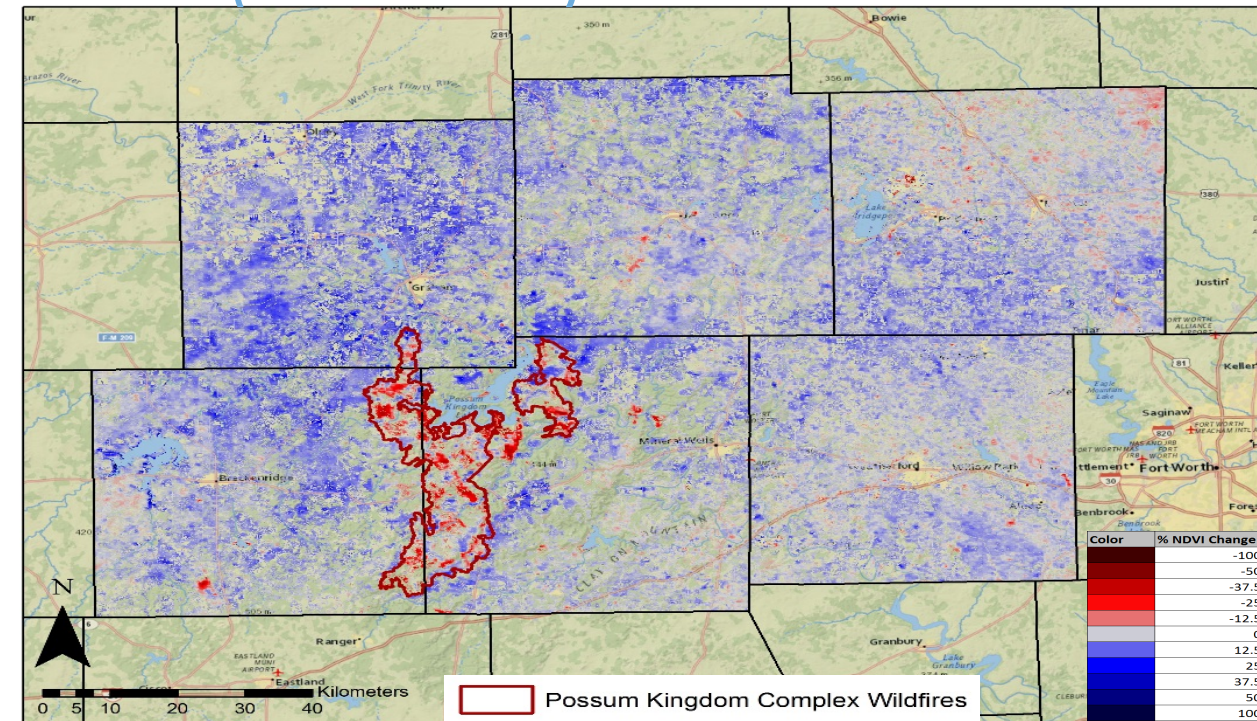

**Grassland Relative Fuel Loads** – Comparison of annual NDVI to 15 year average NDVI. Bluer areas represent greater than average and redder areas represent less than average NDVI response.

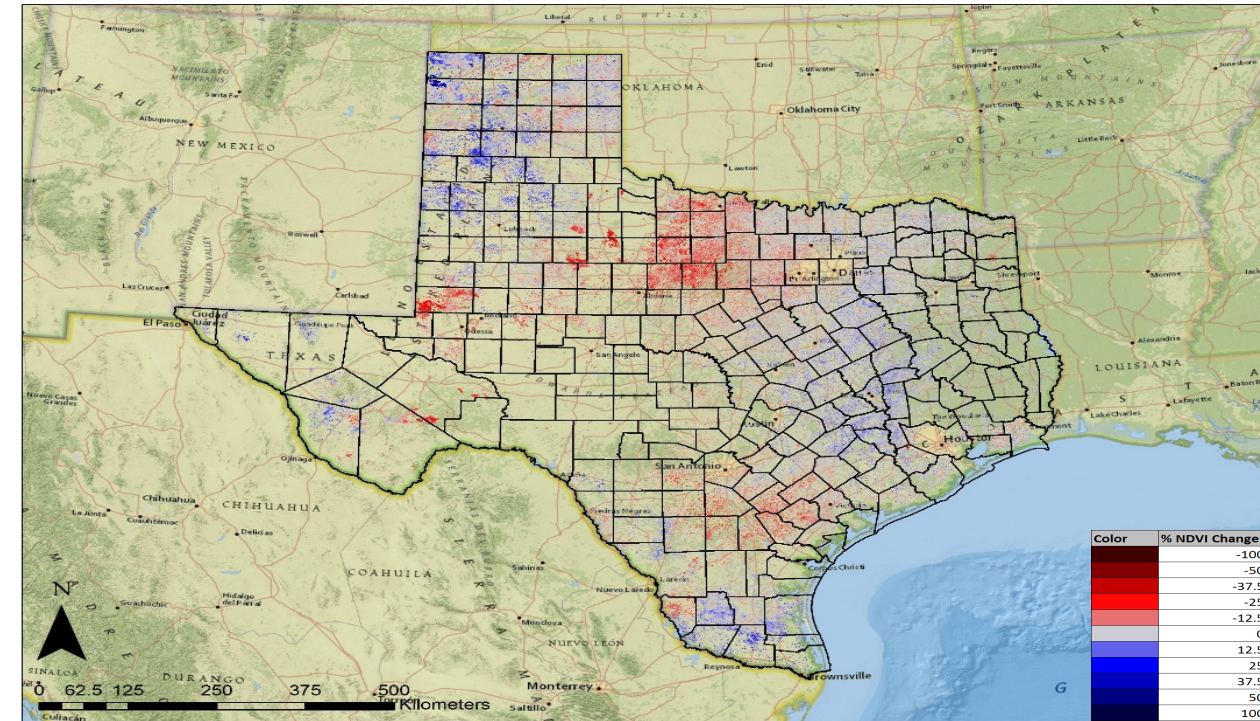

# Results

2012 (Post Fire)

2014

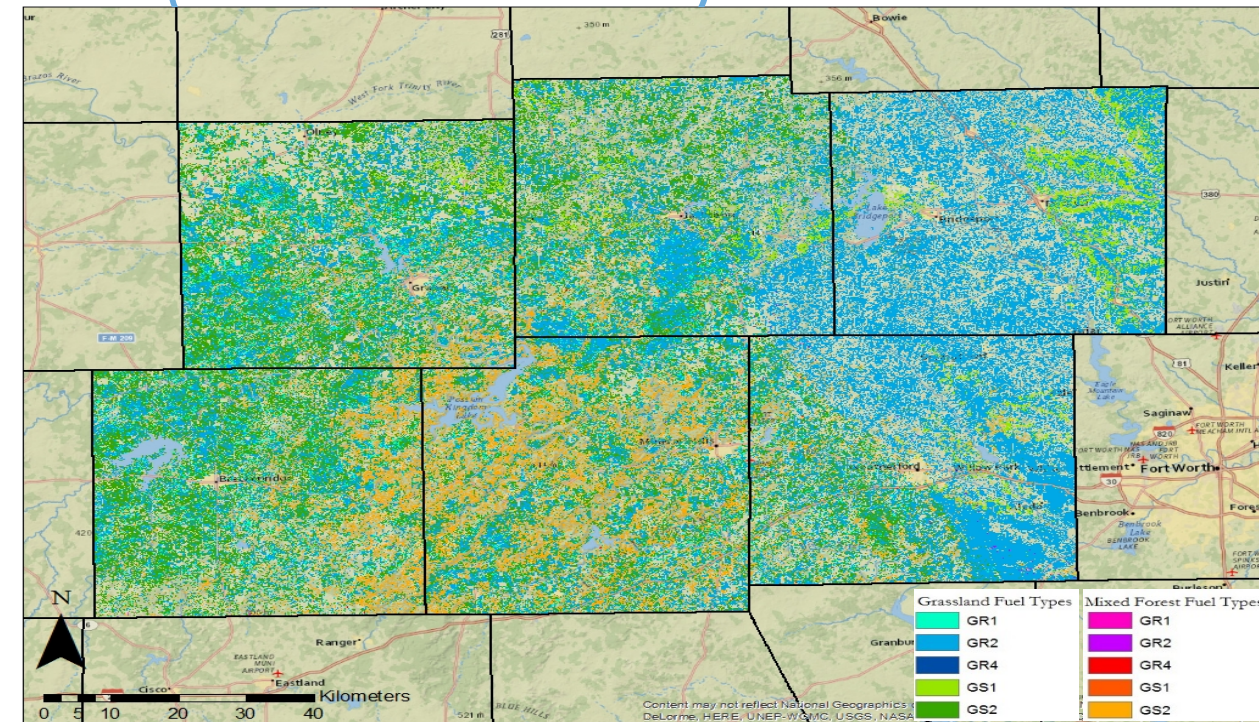

**Grassland Relative Fuel Loads** – Comparison of annual NDVI to 15 year average NDVI. Bluer areas represent greater than average and redder areas represent less than average NDVI response.

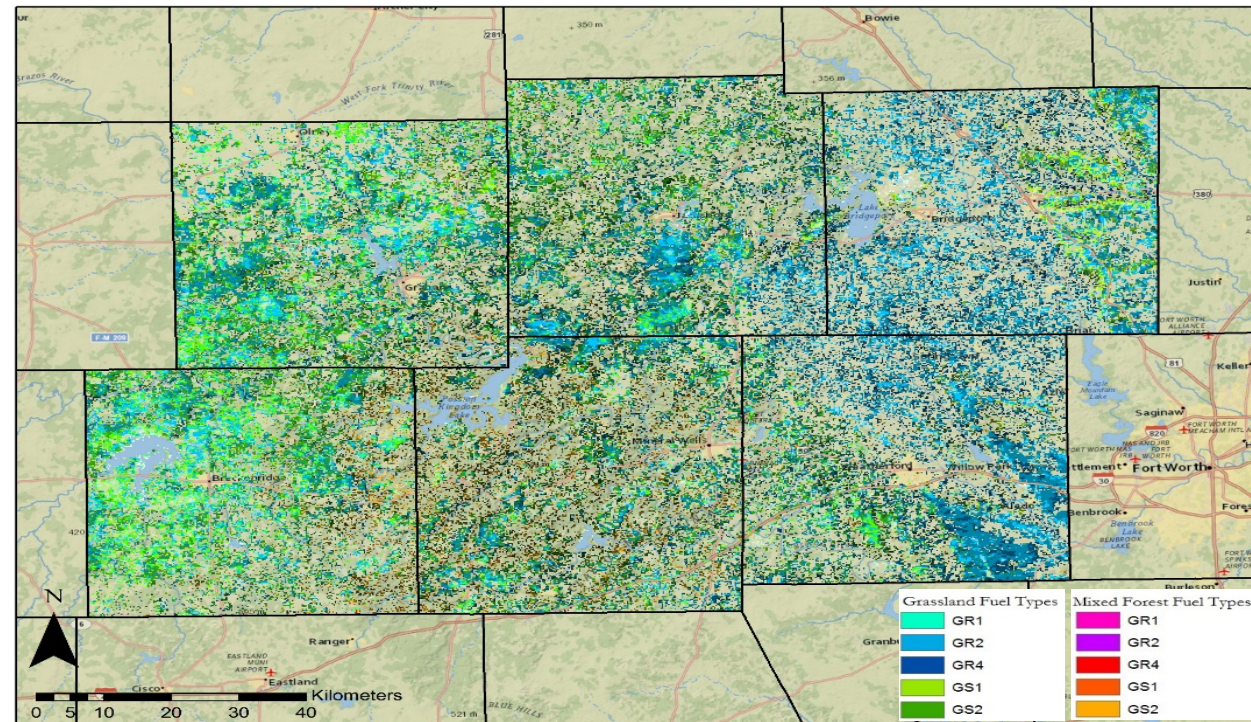

# Results

## TFS (Surface Fuels)

## 2014 (Relative Fuels)

**Fuel Type Maps** – MODIS data was used to calculate zonal mean for each fuel type based on 15 year cumulative annual NDVI. The difference of the 2014 annual NDVI was to show percentage difference from the mean for each fuel type.

# Conclusions

## Fuel Loads

Geospatial information on grassland **fuel loads** are important for assessing wildfire risk

## MODIS NDVI

Annual cumulative **MODIS NDVI** offers a means to monitor relative fuel loads

## Fuel Models

Such MODIS NDVI products can serve as inputs to **fuel load models**

# Wyoming Ecological Forecasting

*Mapping Cheatgrass Phenology and Distribution in a Post-Wildfire  
Landscape in Wyoming's Medicine Bow National Forest  
Fort Collins USGS- CSU Fall 2015*

Darin Schulte(Project Lead)

Stephanie Krail

Chandra Fowler

Oliver Miltenberger

*End-users:*

Wyoming Game and Fish Department  
USDA Forest Service, Laramie District

*Collaborators:*

Natural Resource Ecology Laboratory, Colorado State  
University

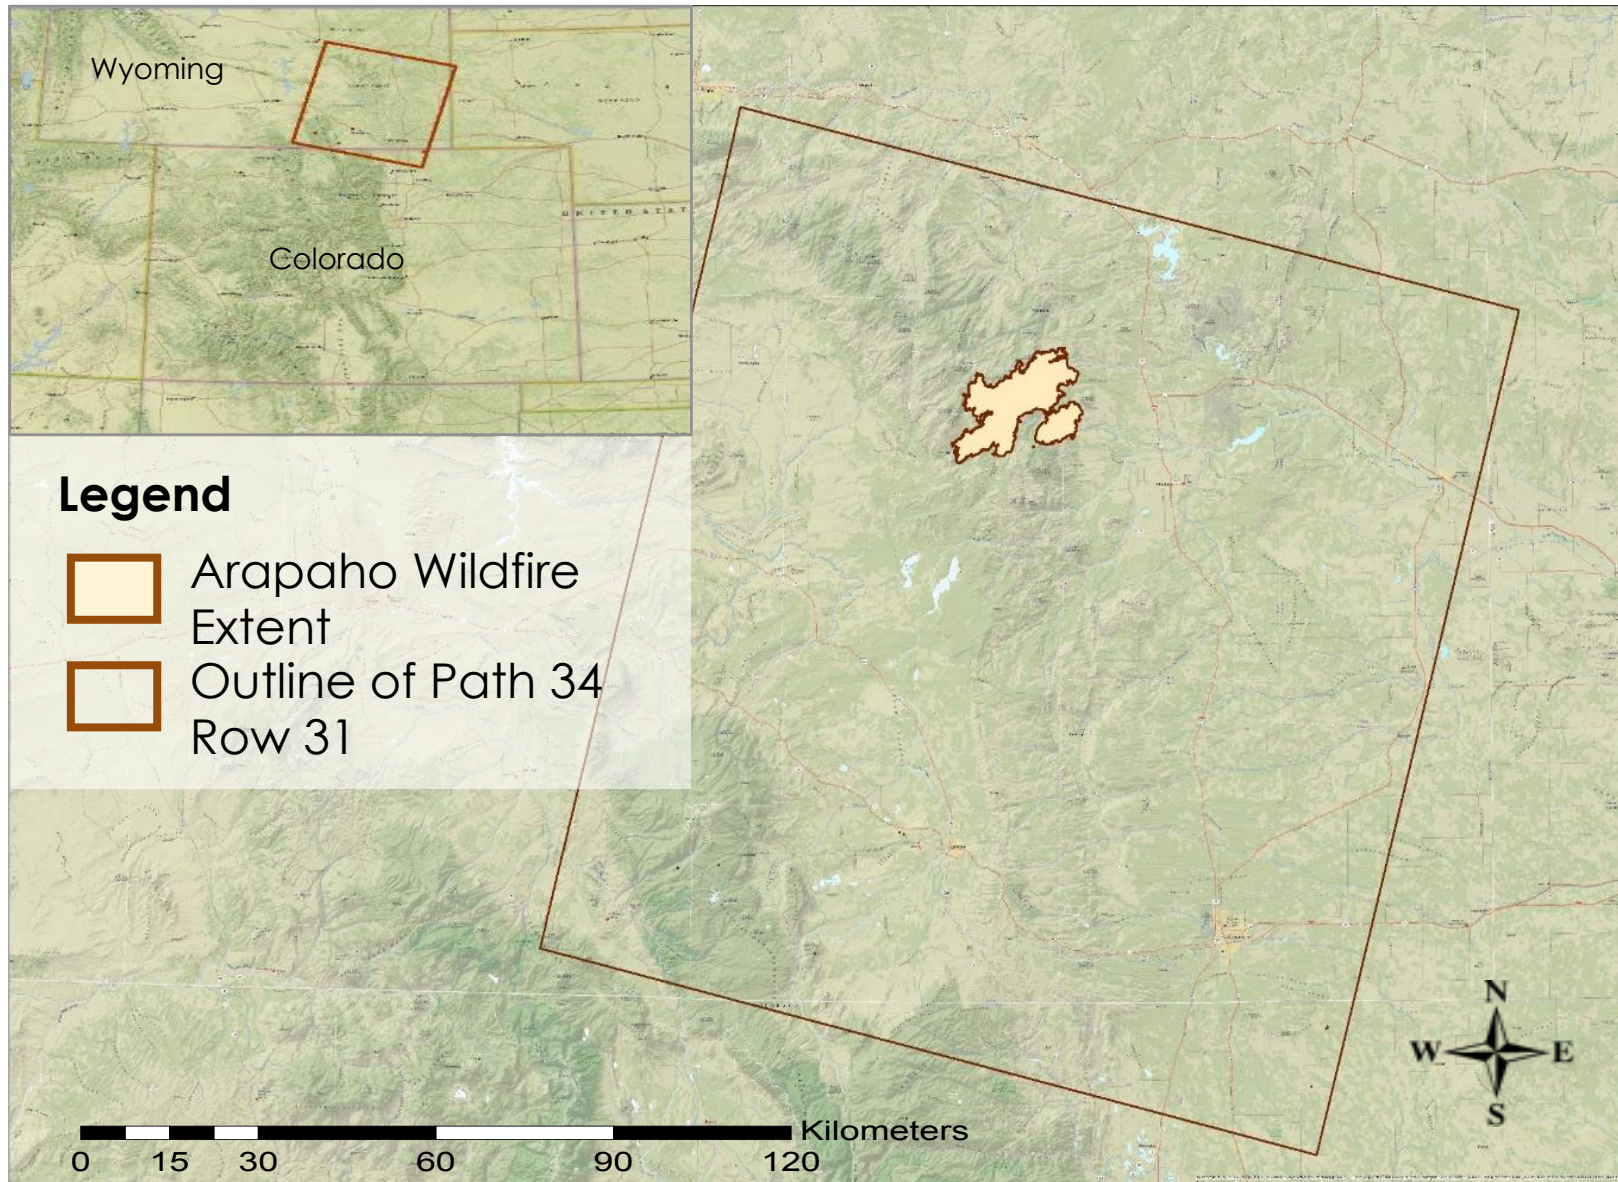

# Community Concerns & Objectives

- ▶ Cheatgrass is a problematic **invasive** species
- ▶ 2012 **Arapaho wildfire** in the Medicine Bow National Forest, WY
- ▶ **Expensive & labor intensive** mitigation
- ▶ Accurate maps needed for **targeted management**
- ▶ Utilize a Species Distribution Models (SDMs) to **map cheatgrass cover**
- ▶ Assess **phenological characteristics** of areas with predicted cheatgrass cover
- ▶ Inform **targeted mitigation** of cheatgrass populations for project partners

# Study Area

# Data Processing

**Vegetation  
indices**

**Topographic  
indices**

**Presence / Absence**

**Phenology  
time series**

# Results

## Legend

Presence threshold = 0.472

# Results

Legend

- Absence
- Presence

# Results

**0.4-0.6**

8862.93 ha

**0.6-0.8**

7495.56 ha

**0.8-1.0**

2191.5 ha

# Errors and Uncertainties

## Input Data

---

- ▶ **Cloud cover** and **snow**
- ▶ **Field data** from multiple years
- ▶ **Percent cover** threshold

## Modeling

---

- ▶ Exploring **parameter values**
- ▶ **Binary classification** threshold

## Phenology

---

- ▶ Phenology mapping after **recent fires**
- ▶ **Spatial & temporal resolution** of MODIS data

# Conclusions

## Cheatgrass Species Distribution Model

---

- ▶ Valuable **tool** for management
- ▶ Further **model refinement** needed

## Final Products for Partners

---

- ▶ Cheatgrass **cover maps**
- ▶ Phenology **time series**

# Questions?

# Thank You!
